BEFORE THE
POLLUTION CONTROL HEARINGS BOARD
STATE OF WASHINGTON

IN THE MATTER OF
CH₂O, INC.,

Appellant,

v.

STATE OF WASHINGTON,
DEPARTMENT OF ECOLOGY,

Respondent.

PCHB Nos. 84-182 and 85-66

FINAL FINDINGS OF FACT,
CONCLUSIONS OF LAW
AND ORDER

THIS MATTER, the appeals of a regulatory order (DE 84-416) and a \$10,000 civil penalty (DE 84-415) relating to a spill of extremely hazardous wastes occurring in mid-March of 1984, came on for formal hearing before the Pollution Control Hearings Board; Lawrence J. Faulk (presiding), Wick Dufford and Gayle Rothrock at Lacey, Washington, on August 27, 1985. Janet Neer of Robert Lewis & Associates of Tacoma officially reported the proceedings. The appeals were consolidated for the hearing.

Appellant company was represented by Stephen H. Bean, attorney at

1 law. Respondent Washington State Department of Ecology was
2 represented by Assistant Attorney General Leslie Neller-moe.

3 Witnesses were sworn and testified. Exhibits were admitted and
4 examined. Argument was heard. From the testimony, evidence, and
5 contentions of the parties, the Board makes these

6 FINDINGS OF FACT

7 I .

8 CH₂O is a Washington corporation doing business in Thurston
9 County, Washington. CH₂O, Inc., operates a water treatment,
10 chemical manufacturing, and sales facility south of Olympia,
11 Washington, along Old Highway 99.

12 II

13 On March 8, 1984, approximately 100 gallons of a liquid labeled
14 FOC-50 spilled to interior drains in the CH₂O building. Most of the
15 spill collected in a central sump and then drained to a holding tank
16 outside the building. CH₂O employees pumped some of the FOC-50 out
17 of the holding tank, but the pump broke preventing complete recovery.
18 The lid on the holding tank was left off allowing rainwater to enter.
19 As a result of exceedingly heavy rain March 12, 1985, and a broken
20 downspout, approximately 50 gallons of FOC-50 overflowed the holding
21 tank and was carried overland by rainwater to the storm water ditch in
22 front of the facility.

23 III

24 CH₂O personnel did not report this spill to the Department of
25 Ecology (DOE) or to any local authorities. The Company's executive

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 director testified that he and other employees were unaware that the
2 spill had occurred until apprised of the fact on March 15, 1984, by
3 DOE's inspector.

4 DOE's inspector arrived on March 15 in response to a citizen's
5 complaint. The complaint related to a strong smell emanating from
6 CH₂O's ditch. The complainant was fearful that whatever had been
7 dumped in the ditch might contaminate his water well across the road
8 from CH₂O's facility.

9 DOE's inspector could distinctly detect the smell from across the
10 road and upon looking in the ditch observed a milky bluish red
11 material there. The company's executive director was contacted and
12 the material in the ditch was pointed out to him. He advised the
13 inspector of the FOC-50 spill inside the building and said this might
14 be some of the same material.

15 The ditch in front of CH₂O where the material was discovered is
16 clearly visible and employees pass it daily coming and going from
17 work. We find that CH₂O either knew or should have known about the
18 spill to the outdoor environment several days before it was brought to
19 their attention by DOE.

20 IV

21 While at the site DOE's inspector took water samples from the
22 ditch. He also obtained from the company a description of the
23 constituents of FOC-50. With this information, he did a so-called
24 "book designation" of the material and classified it as extremely
25 hazardous waste.

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 Analysis of the samples confirmed that the material detected in
2 the ditch was, indeed, FOC-50 and, subsequent bioassay work confirmed
3 the appropriateness of the EHW designation.

4 FOC-50 is an additive to boiler fuels which, at the time, CH₂O
5 was blending at their plant and then selling. It is highly toxic.

6 V

7 The DOE orally requested that CH₂O retain a geohydrological firm
8 to perform a remedial investigation. Because there are a number of
9 water supply wells located in the immediate area, residents within
10 1,000 feet of the plant were advised to stop using their well water,
11 and CH₂O began supplying them with drinking water. A vacuum truck
12 was used to remove all the standing water and FOC-50 in the ditch.
13 Approximately 5,000 gallons were removed and stored on site.

14 VI

15 Early monitoring of existing wells revealed no contamination from
16 FOC-50. However, DOE personnel remained fearful of delayed effects
17 from material that might have migrated into the soils. Their initial
18 impression was that the soil in the area was highly porous and a
19 substantial public health danger was feared.

20 VII

21 On March 30, 1984, the DOE issued Order DE 84-221 requiring CH₂O
22 to (1) hire a qualified geohydrologist to evaluate the impacts of the
23 spill; (2) define ground water direction; (3) develop a data base for
24 establishing the range of soil contamination; (4) develop and
25 implement a sampling program for domestic water supplies in the area;

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 and (5) submit an investigation and report by May 14, 1984.

2 VIII

3 On May 11, 1984, Applied Geotechnology, Inc., submitted a report
4 entitled "Ground Water Contamination Investigation, CH₂O Facility,
5 Thurston County Washington" to comply with the May 14, 1984, deadline
6 required by item 5 of DOE Order DE 84-221.

7 The results reached in this report were; (1) no ground water
8 contamination occurred; (2) initial soil test results indicated that
9 contamination from the spill was limited to the immediate area of the
10 ditch; (3) no soil contamination was found outside the area; (4) no
11 FOC-50 constituents were detected in ground water samples collected
12 from local water supply wells or from the monitoring wells installed
13 during their study; and (5) the soil underlying the admittedly
14 contaminated layer in the bottom of the ditch contains levels of
15 contaminants well below the lower limit threshold for designation as a
16 dangerous waste.

17 IX

18 DOE remained concerned that a potential public health threat
19 existed and that the work done for CH₂O did not provide an adequate
20 basis for a cessation of remedial action. On June 25, 1984, the DOE
21 responded by letter to appellant concerning the May 11, 1985, report.
22 The letter indicated that although the report complied with DOE Order
23 DE 84-221, it did not contain sufficient information to support the
24 report's conclusion and recommendations. Therefore, the letter
25 indicated that a more stringent clean-up program would be required and

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 that a new order would soon be issued to accomplish that result.

2 X

3 On July 11, 1985, DOE issued another order for corrective action,
4 Order No. DE 84-416, requiring CH₂O to perform a number of tasks.

5 DE 84-416 in relevant part reads:

6 IT IS ORDERED THAT CH₂O, Inc. shall, upon
7 receipt of this Order, take appropriate action in
accordance with the following instructions:

8 A. All remaining remedial action (site cleanup,
9 designation of spill wastes, submissions per this
10 order, etc.) be under the direct supervision of a
11 qualified geohydrologist or professional engineer
who has demonstrated experience in hazardous
waste remedial action cleanups.

12 B. By July 20, 1984, the following shall be
accomplished:

13 1. Submit an approvable plan to dispose or
14 recycle all heretofore generated wastes.
15 Wastes from well MW3 must be designated per
16 the "Criteria;" other drilling muds may be
17 disposed of on site. Spill material
18 originally pumped from the ditch may be phase
19 separated and the FOC-50 repackaged as
product, as long as this product can be
20 certified that it meets original
specifications. Otherwise, it, along with
the other phases, must be designated per the
"Criteria."

21 2. Submit an approvable plan to implement the
22 detailed requirements of C. and D., below.

23 C. By August 3, 1984, the following shall be
24 accomplished:

25 1. Properly remove and/or reuse all currently
26 stored wastes accumulated on or before the
27 date of the spill. If designation has not
been completed by this time, transport and
store wastes at a permitted site, following
all applicable WAC 173-303 requirements.

2. Excavate all soil around the spill tanks and,

1 within the brick enclosure, excavate to one
2 foot below the tanks. This shall be done in
3 two steps: remove and store the top two feet
4 of soil; then remove all the rest. Store
5 each lift separately and in a manner to
6 prevent further leaching or migration of this
7 solid waste until proper disposal is approved.

8 3. Excavate, to a depth of one foot, all
9 surfaces of the front (west side of facility)
10 ditch in which the spill occurred. Store
11 this material per C.2., above.

12 4. Excavate the remaining contaminated soils in
13 the front ditch, to a depth of 8.5 feet, and
14 increase the width of excavation two feet per
15 each foot of depth (one foot to either side
16 of ditch center line). Store this material
17 per C.2.; above. Overburden may be
18 stockpiled for later fillings.

19 5. Auger holes shall be made at the bottom of
20 the excavation on five-foot centers to a
21 depth of five feet for additional field
22 sampling and testing. Field sampling
23 equipment shall be capable of measuring trace
24 amounts of chlorinated hydrocarbons and
25 benzenes (e.g., the HNU). If detectable
26 values are found in a hole, that quadrant
27 shall be excavated and another two auger
holes installed at its bottom. Twenty-five
percent of all augered holes shall have cores
sampled in the laboratory to verify field
results. At the end of the field sampling,
the auger holes shall be filled with
bentonite slurry.

6. Excavate, by hand, portions of the side ditch
(south side of facility) that were covered
after the spill. This section shall be
excavated to within one-half foot of the
original ditch bottom and sides. Then
excavate, to a depth of one and one-half
foot, all surfaces of the side ditch from the
front ditch to the southeastern corner of the
building. Store this material per C.2.,
above. Overburden may be stockpiled.

7. Excavate the remaining contaminated soil from
the side ditch as in C.4., above, except
taper the excavation from 8.5 feet at the

1 west end to one foot at the east end.
2 Augering shall also be done per C.5.

3 At this point, there should be at least seven
4 separate waste piles that are secured from
5 run-on, runoff, and other migration problems.
6 The front and side ditches are to be backfilled
7 using similar native soil and brought up to
8 original grade, all after field samples are
9 verified.

10 D. By August 27, 1984, the following shall be
11 accomplished:

12 1. Using the "criteria," designate all waste
13 piles accumulated during the excavation phase.

14 2. Properly manifest and dispose of all
15 designated soils at a permitted facility.
16 Soils that are not designated, but do have
17 toxic properties or contain toxic substances,
18 must be properly solidified (to prevent
19 leaching) before being disposed of at a
20 landfill that has an unconfined aquifer below
21 it, or alternately disposed of at a landfill
22 with a leachate collection system.
23 Additionally, the county health department
24 must approve of the material's disposal.

25 3. Install, or have access to, a monitoring well
26 directly west of the spill ditch in the
27 proximity of the nearest domestic well.
Begin monitoring as follows:

a. Record static water level elevation (tied
to project datum) monthly between
November and May, and also for August.

b. Using approved sampling techniques,
monitor quarterly for:

-Phenol (using EPA method 604);
-Naphthlene;
-TOX;
-Chlorinated Hydrocarbons (method 612);
-Purgable Aromatics (method 602)

The monitoring route will continue for
two years.

1 XI

2 On July 18, 1984, DOE issued Order DE 84-415, Notice of Penalty
3 Incurred and Due, assessing \$10,000 for the spill of FOC-50 in
4 mid-March.

5 DOE Order DE 84-415 in relevant part reads:

6 This penalty is assessed in two parts: A) Five
7 thousand dollars (\$5,000) for violation of WAC
8 173-303-145, Spills and Discharges to the
9 Environment. CH₂O, Inc. spilled an EHW and failed
10 to notify the department or any local authority of
11 the spill. B) Five thousand dollars (\$5,000) for the
12 combined violations of RCW 90.48.080, WAC
13 173-303-060, WAC 173-303-070, WAC 173-303-140, and
14 WAC 173-303-170. CH₂O, Inc. spilled an EHW to the
ground potentially polluting the ground water, waters
of the state, (RCW 90.48.080). CH₂O, Inc.
generates an EHW, however, the waste has not yet been
notified, identified, or designated, (WAC 173-303-060
and 070). CH₂O, Inc. disposed of the waste to an
unauthorized facility within this state, (WAC
173-303-140). CH₂O, Inc. generates an EHW, however
has not complied with any generator requirements.

15 XII

16 On July 20, 1984, appellant feeling aggrieved by DOE corrective
17 action Order DE 84-416, appealed to this Board which appeal became our
18 number PCHB 84-182.

19 XIII

20 On July 27, 1984, appellant applied to the Department for
21 remission or mitigation of the \$10,000 penalty contained in DOE Order
22 DE 84-415.

23 XIV

24 On August 20, 1984, the parties participated in a settlement
25 conference with a member of the Pollution Control Hearings Board. As
26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 a result, the parties entered into a stipulation for further remedial
2 steps. They agreed to; (1) excavate the area near the storm water
3 drainage ditch and store the material in a manner that prevents
4 leaching or migration of the soil until the proper disposal mechanism
5 is determined and approved by WDOE; (3) test the excavated soil and
6 liquid and (3) install a ground water monitoring well across Old
7 Highway 99 in a location designated by DOE.

8 XV

9 Thereafter, over a period of time the company and the agency
10 continued to squabble over details of how the remedial work was
11 progressing. CH₂O felt that it was proceeding in conformance with
12 the stipulation. DOE believed the stipulation was not being adhered
13 to. Questions about how clean the soil must be and the precise
14 placement of monitoring wells were discussed. But matters dragged on
15 through the fall of 1984 and into the winter and spring of 1985.

16 XVI

17 On April 22, 1985, the Department of Ecology ruled on CH₂O's
18 application for remission or mitigation of the penalty. The agency
19 denied relief and affirmed the full \$10,000 penalty.

20 XVII

21 On April 26, 1985, appellant feeling aggrieved by the Department's
22 decision appealed to this Board, which appeal became our cause number
23 PCHB 85-66.

24 XVIII

25 The results of the ongoing discussions were finally memorialized

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 in a new stipulation signed on July 2, 1985. This document set forth
2 detailed requirements for ground water and soil sampling and provided
3 for subsequent definitive identification of ultimate clean up levels.

4 The stipulation included a list of specific removal levels
5 required to be met by DOE's "How Clean is Clean" policy where
6 technically and economically feasible.

7 The agreement provided for reporting to this Hearings Board on
8 completion of various steps, with dismissal of the appeal of the
9 corrective order, DE 84-416, to follow the conclusion of all remedial
10 action.

11 XIX

12 CH₂O does not, as a general proposition, either generate,
13 transport, store or dispose of dangerous wastes. On August 20, 1985,
14 the DOE, upon analysis of the wastes the company routinely generates,
15 advised that such wastes should be categorized as "undesignated
16 wastes."

17 FOC-50, as formerly marketed by the company, was not normally a
18 waste, but rather a product in commerce. However, this material
19 became a waste when it was allowed to escape to the outdoor
20 environment. Accordingly, on a one-time basis, related to the spill
21 episode only, CH₂O became a generator of dangerous wastes.

22 XX

23 On August 26, 1985, the day before the hearing in this case,
24 Applied Geotechnology, Inc., submitted a report entitled "Soil and
25 Ground Water Consultation Services, CH₂O Facility, Olympia,

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 Washington." The report dealt essentially with the results of the
2 soil and ground water contamination analysis completed subsequent to
3 September, 1984.

4 The stated overall results were that all detected soil and ground
5 water contaminants were at concentrations below the clean-up standards
6 from DOE's "How Clean is Clean" policy included in the July 2, 1985,
7 stipulation.

8 XXI

9 Christopher Thompson, executive director of CH₂O testified that
10 this was the first violation of this sort for the company and that it
11 was an accident; that the company had spent approximately \$165,000 for
12 remedial corrective actions and agreed to spend an additional \$48,000
13 to \$64,000 to monitor water wells for two years; that they have
14 disconnected the drain pipe to the storage tanks so that a spill of
15 this type cannot happen in the future; and that they have discontinued
16 handling FOC-50.

17 XXII

18 Up to the present, no contamination of drinking water has been
19 found as a result of the spill at issue. Whether further monitoring
20 will reveal such effects cannot now be said. However, the potential
21 for damage to the public health, if not totally eliminated, has been
22 substantially diminished by clean-up efforts.

23 XXIII

24 Any Conclusion of Law which is deemed a Finding of Fact is hereby
25 adopted as such.

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 From these Findings of Fact the Board comes to these

2 CONCLUSIONS OF LAW

3 I

4 The Board has jurisdiction over these persons and these matters.
5 Chapters 43.21B, 90.48 and 70.105 RCW.

6 II

7 RCW 90.48.080 Entitled "Discharge of Polluting Matter in Waters
8 Prohibited" reads as follows:

9 It shall be unlawful for any person to throw, drain,
10 run, or otherwise discharge into any of the waters of
11 this state, or to cause, permit or suffer to be
12 thrown, run, drained, allowed to seep or otherwise
13 discharged into such waters any organic or inorganic
14 matter that shall cause or tend to cause pollution of
15 such waters according to the determination of the
16 commissions, as provided for in this chapter.
17 (Emphasis added.)

18 The definition of "pollution" refers to alterations in the
19 properties of waters "as will or is likely to" render such waters
20 injurious to people or other living things. The definition of "waters
21 of the state" includes underground waters and all surface waters and
22 water courses within the state. RCW 90.48.020.

23 Given the nature of the material spilled and the character of the
24 neighborhood, we conclude the discharge at issue was "likely to"
25 render the waters harmful and thus, was an event which would "tend to
26 cause pollution." Further, we conclude that the waters in and under
27 the ditch to which the spill migrated were "waters of the state"
within the statutory definition. Therefore, we hold that a violation
of RCW 90.48.080 occurred.

III

As to causation, the spill cannot be explained away as an act of God. Along with the rain, the company's failure to replace the holding tank lid, the lack of a functioning pump and the failure to maintain the downspout combined to produce the result. We hold that the statute imposes strict liability and that CH₂O is responsible for the spill. The company did "cause, permit or suffer" the discharge in violation of RCW 90.48.080.

IV

Chapter 70.105 RCW is the state hazardous waste disposal statute. RCW 70.105.050 makes unlawful the disposal of "designated extremely hazardous waste" except at an approved site or processing facility.

Chapter 173-303 WAC implements the hazardous waste statute. WAC 173-303-140 essentially restates the statutory prohibition on unauthorized disposal.

We conclude that this regulatory section was violated by the spill at issue. Again, this law establishes a strict liability standard and we hold that CH₂O was the responsible party.

V

WAC 173-303-145 entitled "Spills and Discharges into the Environment" in pertinent part reads:

(1) Purpose and applicability. This section sets forth the requirements for any person responsible for a spill or discharge into the environment, except when such release is otherwise permitted under state or federal law. This section shall apply when any dangerous waste, or when any material having the properties of a dangerous waste, as described in WAC 173-303-080 through 173-303-103,

1 is intentionally or accidentally spilled or
2 discharged into the environment (unless otherwise
3 permitted) such that public health or the environment
4 are threatened, regardless of the quantity of
5 material or the quantity exclusion limits for
6 dangerous waste.

7 (2) Notification. Any person who is responsible
8 for a nonpermitted spill or discharge shall
9 immediately notify the individuals and authorities
10 described for the following situations:

11 (a) For spills or discharges onto the ground or
12 into ground water or surface water, notify all local
13 authorities in accordance with the local emergency
14 plan. If necessary, check with the local emergency
15 service coordinator and the fire department to
16 determine all notification responsibilities under the
17 local emergency plan. Also, notify the appropriate
18 regional office of the department of ecology;....

19 The term "dangerous waste" includes "extremely hazardous waste."
20 WAC 173-303-040(18). We conclude that a nonpermitted spill of a
21 dangerous waste (FOC-50) did occur sometime between March 8 and
22 March 15, 1984, and that appellant, as the responsible party, failed
23 to notify the proper authorities as provided by WAC 173-303-145.

24 We are not persuaded by CH₂O's claim of ignorance of the
25 occurrence. The evidence was there for all to see and smell. Neither
26 the complainant neighbor nor DOE's inspector had any trouble detecting
27 the spill. CH₂O should have been aware of it. Indeed, the in-plant
FOC-50 spill and the pump problems should have put them on the alert.

28 VI

29 The failure to notify is, we believe, a serious violation. When
30 spills of dangerous wastes occur, no one has the hind-sight of such
31 detailed studies as have been performed here. Action must be taken
32 quickly in light of the reasonably perceived risks. When substances

1 which present hazards not fully known are unexpectedly introduced into
2 an imperfectly understood physical environment, the earliest possible
3 notification of events (such as the spill in this case) is necessary
4 in order to protect the public health.

5 VII

6 WAC 173-303-060 requires any person who generates a dangerous
7 waste to get a government identification number. WAC 173-303-070
8 requires generators of dangerous wastes to designate the wastes they
9 generate according to various criteria for evaluating the degree of
10 hazard presented. WAC 173-303-170 sets forth general requirements for
11 generators including the designation function.

12 CH₂O is asserted to have violated these sections of the
13 regulation (as well as the spill prohibition and notice requirements)
14 and, because in this single instance the company generated dangerous
15 waste, it does stand in technical violation of these provisions under
16 a strict reading of the applicable definitions. We so hold, although
17 we believe these sections were primarily designed to regulate those
18 who commonly and deliberately generate dangerous wastes, not those who
19 do so on a one-time basis because of an upset in their system.
20 Indeed, there appears here to be an attempt to add on a number of
21 peripheral violations, unrelated to the conduct which is really of
22 concern to the agency.

23 VIII

24 In sum, we conclude that CH₂O violated each of the statutory and
25 regulatory provisions which form the basis for the corrective order (DE

1 84-416) and the civil penalty (DE 84-415).

2 The various stipulations (and actions pursuant thereto) appear, in
3 large measure, to have rendered moot the earlier dispute over the
4 terms of the corrective order. Nonetheless, we conclude the issuance
5 of such an order was proper. RCW 70.105.095. That section authorizes
6 corrective orders "whenever on the basis of any information the
7 department determines that a person has violated or is about to
8 violate any provision of this chapter."

9 IX

10 Because the violations did in fact occur, the imposition of a
11 civil penalty was lawful under both RCW 90.48.144 and 70.105.080. The
12 former of these authorizes penalties of up to \$5,000 per day for each
13 violation. The latter, penalties of up to \$10,000 per day for each
14 violation.

15 X

16 In determining the amount of the penalty which should be sustained
17 against the appellant, the surrounding facts and circumstances are
18 relevant. Factors bearing on reasonableness must be considered.
19 These may include:

- 20 (a) The nature of the violation
21 (b) The prior actions of the violator; and
22 (c) Actions taken to solve the problem.

23 XI

24 On consideration of these matters, we sustain in full the penalty
25 (\$5,000) assessed for failure to notify the DOE or other authorities.

26 FINAL FINDINGS OF FACT,
27 CONCLUSIONS OF LAW & ORDER
PCHB Nos. 84-182 & 85-66

1 We regard this as a critically important provision of the whole
2 dangerous waste regulatory scheme. Everyone who handles materials
3 which may pose hazards if allowed to escape into the environment
4 should be sensitive to the risks and quick to let the authorities know
5 when an accident occurs.

6 XII

7 As to the spill itself, however, we feel that the penalty should
8 be reduced. No harm to ground water uses or human health and safety
9 or to the well-being of other aspects of the environment has been
10 shown. This company has no prior record of violating the hazardous
11 waste or water pollution laws and has discontinued handling the liquid
12 that spilled. It has also taken steps to insure that another spill
13 could not leave the building. The only waste the company routinely
14 generates has been classified as "undesigned waste" by the DOE.

15 The company has spent approximately \$165,000 to solve the problem
16 caused by the spill and has committed to spend another \$48,000 to
17 \$64,000 to monitor the local water wells for two years.

18 Three of the five sections cited in relation to the spill itself
19 were violated only technically, not in a manner which warrants a
20 penalty. The purpose of the civil penalty provisions is not primarily
21 to punish but to secure compliance.

22 Under all the circumstances of this case, including the company's
23 efforts to solve the problem, we conclude that the statutory objective
24 of the penalty will be adequately served by the order set forth below.

XIII

Any Finding of Fact which is deemed a Conclusion of Law is hereby adopted as such.

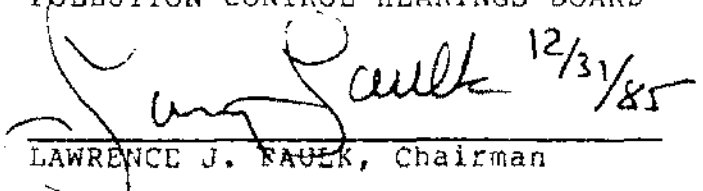

From these Conclusions of Law the Board enters this

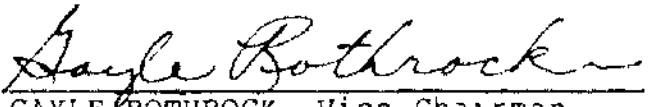

ORDER

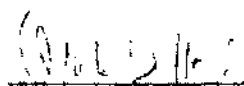

Washington State Department of Ecology Order DE 84-416 is affirmed. The \$5,000 penalty assessed for violation of WAC 173-303-145 (failure to notify) in Washington State Department of Ecology Order DE 84-415 is affirmed; \$1,000 of the \$5,000 assessed for water pollution violations and other dangerous waste violations is affirmed. The remaining \$4,000 is vacated.

DATED this 31st day of December, 1985.

POLLUTION CONTROL HEARINGS BOARD
